

WHAT'S IN YOUR BOX?

The Factory-Assembled, Drop-In Replacement

The original oil filter housings on the Pentastar V6 are known for their high failure rates. There are multiple weak points in the original design where oil can leak. Our engineers evaluated the original units and designed housings with multiple improvements over the original to address the OE weak points while matching thermal characteristics.

**What's inside the Tech Expert® box...
a factory-assembled drop-in unit
with improvements to prevent leaks.
What's in your box?**

Inside the Tech Expert® by NAPA® Echlin® box, you'll find an Oil Filter Housing Kit that is already assembled from the factory. Our assemblies include new oil pressure sensors, oil temperature sensors, oil coolers, correct year/make/model-specific oil filters and new gaskets and seals already installed. Our Oil Filter Housing Kits also include the intake manifold gaskets needed for a complete repair.

REQUIRED**

Factory-assembled,
drop-in replacement

Designed with a high-strength, high-temp
synthetic housing to maintain OE-matching
heat-dissipating characteristics

Our engineers identify weak points
in the original units and design
improvements to address them

Tech Expert® Oil Filter Housing Kits feature improvements over the OE

OE Problem:

Oil leaks from the brass sensor inserts because there is not an effective seal between the brass and the synthetic housing material.

Tech Expert® Solution:

Additional O-rings are installed on our knurled brass inserts to prevent oil leaks.

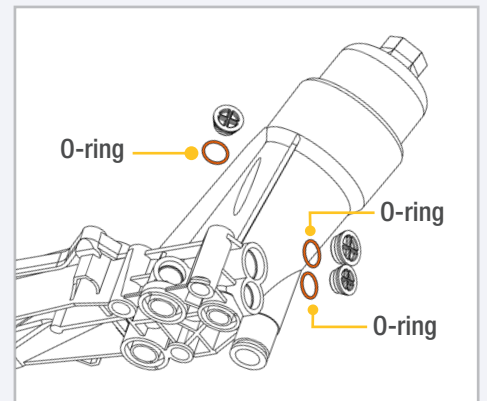

OE Problem:

Oil leaks from the back of the housing around the core plugs that are installed without any seals or O-rings.

Tech Expert® Solution:

Tech Expert® installs an O-ring on each core plug before ultrasonically welding them into the housing. This creates a positive, long-lasting seal.

OE Problem:

Oil contaminates the coolant causing cooling system problems, resulting in overheating and premature radiator failure. This is because there is no seal on the core plug that separates the oil and coolant passages.

Tech Expert® Solution:

We added a robust seal to the core plug which separates these two passages. This enhancement prevents an internal failure and cross-contamination.
