

OIL FILTER HOUSING KITS

Highlights

1

Features design improvements over the original to prevent oil leaks

2

Comes assembled from the factory with both sensors and heat exchanger already installed, and includes new gaskets

3

Manufactured utilizing high-strength synthetic materials which match the cooling characteristics of the OE design

What's in your box?™

Impact on Engine Systems

A failed oil filter housing assembly can leak oil, causing severe unreparable damage, resulting in complete engine replacement

OE units can also fail internally, which can cause the engine oil and coolant inside of them to mix, resulting in a potential engine failure

Over-torquing during installation can damage the housing, resulting in an oil leak

Overview

Chrysler Oil Filter Housings

Often referred to as Chrysler, or Stellantis, oil filter housings, these modular housings used on the Pentastar 3.2L and 3.6L have looked similar since 2011. Although they do look alike, there are real differences based on model year. Earlier housings used a different filter with a higher flow rate, and four different oil pressure sensors have been used since 2011. Because these housings are responsible for cooling and filtering the oil, it is critical that they match the original design for optimal performance.

Application-Specific Engineering

Tech Expert® PN	EOF100	EOF101	EOF103	EOF104	EOF111

Sales Opportunities

It is common for the OE filter housings on Pentastar engines to leak around the plugs. Contrary to popular belief, these high-temp synthetic housings do not warp. Instead, the plugs used on the housings start to leak. During the manufacturing process, multiple plugs are inserted into the housing where the oil passages were formed. After years of service and thousands of heat cycles, these plugs can fail, allowing oil to seep from the housing.

Tech Expert® Oil Filter Housings are built different. Instead, we install seals onto the plugs before ultrasonically welding them into the housing, eliminating the weak point in the original design.

Problem:

The OE housing plugs do not feature any extra sealing components, often resulting in oil leaks.

Tech Expert® Solution:

Tech Expert® installs an O-ring on each plug before ultrasonically welding them into the housing. This creates a positive, long-lasting seal.

Sales Opportunities

It is also common for the Pentastar housings to leak around the oil pressure sensor. The oil pressure around the sensor is high enough that it can eventually seep between the housing and the brass inserts.

To prevent future leaks, the Tech Expert® design utilizes high-temp, distortion-resistant seals installed onto knurled brass inserts which are heat staked into the housing. This is just another example of how NAPA® Echlin® engineers have improved the OE design.

Problem:

Oil leaks around the sensors and can lead to a complete replacement.

Tech Expert® Solution:

1 Tech Expert® Housings feature dual high-temp, distortion-resistant seals on the oil pressure sensor insert, as well as increased knurling on both of the brass inserts in order to prevent oil leaks

2 New oil pressure and oil temperature sensors are installed at the factory and correctly torqued in a controlled environment, eliminating the chance of damaging the threads or housing

What's New

Oil Filter Housing Assemblies

To help keep engines running strong, it is critical that the oil filter housing matches the heat-dissipating characteristics of the original. When the OE uses synthetic materials, NAPA® Echlin® does, and when the OE uses metal, NAPA® Echlin® does.

We have recently introduced additional Oil Filter Housings for import and domestic vehicles and are committed to expanding this product line.

Oil Filter Housing Kits

Factory-Assembled, Complete, Drop-in Solution

The Tech Expert® EOF100 comes completely assembled, so all you have to do is drop it in place. All Tech Expert® Oil Filter Housing Kits include new oil temperature and oil pressure sensors. The oil filter and cap are exact OE-match and come already installed. The Tech Expert® Kit includes all new gaskets and hardware for a clean install – you won't have to reuse any of the old, worn pieces.

Vehicle-Specific Filters

Tech Expert® Housings are also vehicle specific and designed to use the correct oil filter cataloged for the vehicle. Some competitor oil filter housings are universal, utilizing a single filter part number across multiple model years. Not only can this cause confusion, but the oil filter may not have the flow rate specified by the vehicle manufacturer.

Testing and Validation

NAPA® Echlin® Oil Filter Housings and their installed components undergo extensive testing so that you can install them with confidence. Housings are pressure-tested for leaks, and oil pressure sensors and oil temperature sensors are tested for accuracy.

New applications are also tested for fit, performance and durability on real vehicles at our testing center in Irving, Texas.

NAPA® Echlin® Pro Training Tech Tip

As experienced ASE-certified automotive technicians themselves, NAPA® Echlin® Pro Trainers are experts in Oil Filter Housing Kits.

Here's what they say to look out for during an oil filter housing replacement.

It is important to follow the correct torque specs when installing a new housing — Slowly tighten each bolt, alternating corners to make sure all of the seals seat correctly

Before removing the intake manifold to access the oil filter housing, ensure that any dirt and debris are removed from the area, and cover the intake ports with tape to prevent dirt, coolant, or oil from getting into the intake ports — Remove the tape on reassembly

It is common for the seals to be damaged during installation, especially the front seal directly under the filter — It is recommended to use automotive lubricant/grease on this seal and take extra care when installing the housing
