Hydraulic Electric Unit Injectors (HEUI) – Diesel Top Sellers

Advanced Technology for Diesel Engines

The Hydraulic Electronic Unit Injector (HEUI) system uses high-pressure engine oil instead of a camshaft to control the injection of fuel. Unlike a conventional fuel system, where fuel injection pressures increase proportionally with engine speed, the HEUI system works with the ECM to electronically control injection independent of engine speed.

To ensure continued performance, all NAPA® Echlin® Diesel HEUI Injectors are the product of an exhaustive remanufacturing process at our TS16949, ISO9001, and ISO14001 certified facility.
