## EXPERT SOLUTIONS

### Turbocharger Actuator

Tech Expert™ now offers our TBA100 Turbocharger Actuator, also known as the Variable Geometry Turbocharger (VGT) Control Valve for Ford 6.0L diesel engines. The 6.0L VGT actuator controls the flow of exhaust gases through the turbocharger and when it fails, the vanes can stick, the vehicle can lose power and/or generate too much or too little boost pressure, causing damage to the engine. Tech Expert™ now offers a high-quality, direct replacement for failed VGT actuators with a new bracket and hardware to help restore proper turbocharger function.
