Competitor's unit is prone to breaking at high-stress point on shift tube

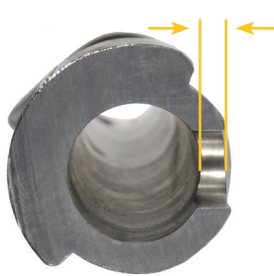

The OE Problem

Steering column shift tubes are used to move the automatic transmission's mechanical linkage when shifting at the steering column. Service technicians continue to see vehicles coming into their shops with broken steering column shift tubes. This labor intensive repair can exceed 2 hours.

TECH EXPERT™
3.2 mm

Cross-section shows TECH EXPERT™ is 2X thicker where it counts

TECH EXPERT™ Proven Quality Solution

TECH EXPERT™ provides a proven quality solution with Steering Column Shift Tubes that are 3.2 mm thick at the highest stress point, twice as thick as the competition. These high-volume, high-quality TECH EXPERT™ parts are engineered as direct-fit replacements for the broken units. Why replace the unit with another that may fail again? Repair it right the first time with stronger, longer-lasting TECH EXPERT™ Steering Column Shift Tubes.
