DIESEL

"Blue Spring" Fuel Pressure Regulator Kit

A weakened stock spring can cause hard starting, stalling, poor fuel mileage, and poor acceleration. As a result, the drop in fuel pressure caused by the weakened spring can damage the injector. To make repair easier, our Fuel Pressure Regulator Kit includes everything you need to reseal the fuel filter housing: our blue spring, O-rings, and all the necessary hardware.

Increases fuel pressure by 10-15 PSI, maximizing performance and injector life

Comes complete with gasket, O-rings, and hardware for ease of installation

FPU200

6.0L Ford Trucks (07-03)
VIO Over 725,000

Increased Pressure

Once installed, our blue spring will increase fuel pressure by 10-15 psi, eliminating potential for injector damage
